SPECIAL SECTION ON HARMONICS STABILITY AND MITIGATION IN POWER ELECTRONICS

GUEST EDITORIAL
Special Section on Harmonics Stability and Mitigation in Power Electronics ...................................................... F. Blaabjerg 1

SPECIAL SECTION PAPERS

Converter Issues
Design of LCL Filters With LCL Resonance Frequencies Beyond the Nyquist Frequency for Grid-Connected Converters ........................................... Y. Tang, W. Yao, P. C. Loh, and F. Blaabjerg 3
Benchmark of AC and DC Active Power Decoupling Circuits for Second-Order Harmonic Mitigation in Kilowatt-Scale Single-Phase Inverters .............................................................. Z. Qin, Y. Tang, P. C. Loh, and F. Blaabjerg 15
Analysis About Overshoot Peaks Appearing in the Current Loop With Resonant Controller ............................. H. Yi, F. Zhuo, and F. Wang 26
Multifrequency Current Control With Distortion-Free Saturation ............................................................... L. Harnefors, A. G. Yepes, A. Vidal, and J. Doval-Gandoy 37
Three-Phase Three-Wire Active Power Filter With D-Σ Digital Control to Accommodate Filter-Inductance Variation ........................................... T.-F. Wu, H.-C. Hsieh, C.-W. Hsu, and Y.-R. Chang 44

Stability and Harmonic Modeling
Harmonic Analysis of Grid Connected Power Electronic Systems in Low Voltage Distribution Networks .............................................................. D. Kumar and F. Zare 70
A Matrix-Based Multifrequency Output Impedance Model for Beat Frequency Oscillation Analysis in Distributed Power Systems ......................................................... Z. Yue, F. Zhuo, S. Yang, Y. Pei, and H. Yi 80
Stability Analysis and Dynamic Performance Evaluation of a Power Electronics-Based DC Distribution System With Active Stabilizer .......................... M. Karbalaye Zadeh, R. Gavagasz-Ghoachani, S. Pierfederici, B. Nahid-Mobarakhe, and M. Molinas 93
Experimental Validation for Impedance-Based Small-Signal Stability Analysis of Single-Phase Interconnected Power Systems With Grid-Feeding Inverters ......................................................... S. Lissandron, L. Dalla Santa, P. Mattavelli, and B. Wen 103
Passivity-Based Stability Assessment of Grid-Connected VSCs—An Overview .............................................................. L. Harnefors, X. Wang, A. G. Yepes, and F. Blaabjerg 116
Investigations in the Modeling and Control of a Medium-Voltage Hybrid Inverter System That Uses a Low-Voltage/Low-Power Rated Auxiliary Current Source Inverter ......................................................... S. Papadopoulos, M. Rashed, C. Klumpner, and P. Wheeler 126
Frequency Domain Stability Analysis of MMC-Based HVDc for Wind Farm Integration ................................ J. Lyu, X. Cai, and M. Molinas 141
Effects of Passive Components on the Input Current Interharmonics of Adjustable-Speed Drives ............................................................... H. Soltani, F. Blaabjerg, F. Zare, and P. C. Loh 152

(Contents Continued on Back Cover)
Mitigation and Applications

A Novel Impedance Converter for Harmonic Damping in Loop Power Distribution Systems ......................................................... 162

A Multipulse Pattern Modulation Scheme for Harmonic Mitigation in Three-Phase Multimotor Drives ........................................ 174

Grid Harmonics Compensation Using High-Power PWM Converters Based on Combination Approach .......................... 186

An Active Filter With Resonant Current Control to Suppress Harmonic Resonance in a Distribution Power System ................. 198

DC-Bus Voltage Regulation for a DC Distribution System With a Single-Phase Bidirectional Inverter ......................................... 210

Current Harmonics From Single-Phase Grid-Connected Inverters—Examination and Suppression ........................................ 221

SPECIAL SECTION ON POWER ELECTRONICS AND BIOMEDICAL APPLICATIONS

GUEST EDITORIAL

Special Section on Power Electronics and Biomedical Applications ............................................................. A. Prodić 234

SPECIAL SECTION PAPERS

Emerging Cancer Therapies

A Versatile Multilevel Converter Platform for Cancer Treatment Using Irreversible Electroporation .............................. 236

Wireless Power Harvesting Systems for Biomedical Implants

Three-Phase Time-Multiplexed Planar Power Transmission to Distributed Implants ........................................ 263

Wireless Power Supply for ICP Devices With Hybrid Supercapacitor and Battery Storage .................................................. 273

Magnetic Resonance Imaging Power: High-Performance MVA Gradient Drivers .................................................. 280

Systems for Energy Harvesting from Human Motions

Biomechanical Energy Harvesting System With Optimal Cost-of-Harvesting Tracking Algorithm .............................. 293

Digitally Controlled Energy Harvesting Power Management System .............................................................. A. J. Dickson, S. Burton, M. Shepertycky, Y.-F. Liu, and Q. Li 303

Merged Flyback–SC-Based Output Stage for Versatile Portable Transcutaneous Electrical Stimulators ........................ 318
